In a previous blog post defining machine learning you learned about Tom Mitchell's machine learning formalism. Here it is again to refresh your memory. A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P , if its performance at tasks in T , as measured by P , improves with experience E . Use this formalism to define the T , P , and ...

Representation and Visualization of Data. At the beginning of this chapter we quoted Tom Mitchell's definition of machine learning: "Well posed Learning Problem: A computer program is said to learn from experience E with respect to some task T and some performance measure P , if its performance on T , as measured by P , improves with experience E ." Data is the "raw material" for machine learning.

Semi-supervised learning is of great interest in machine learning and data mining because it can use readily available unlabeled data to improve supervised learning tasks when the labeled data are scarce or expensive. Semi-supervised learning also shows potential as a quantitative tool to understand human category learning, where most of the input is self-evidently unlabeled. In this ...
