Modern H. sapiens Is Highly Derived in Its Osteology. Morphologically, our living species H. sapiens is extremely distinctive. It is not unique among hominids in having a large brain [averaging ≈1350–1400 mL in volume ()]; but it is unique in the proportions of the skull in which that brain is housed, and in numerous smaller-scale cranial characteristics (4, 9).

Section 5 returns to this theme. 2.3 Criteria for Identifying Scientific Revolutions . I. B. Cohen (1985, chap. 2) lays down four historical tests, four necessary conditions, for the correct attribution of a revolution. First, the scientists involved in the development must perceive themselves as revolutionaries, and relevant contemporaries must agree that a revolution is underway. Second ...
